

Step 1= Go on youtube or online and find a video you can embed

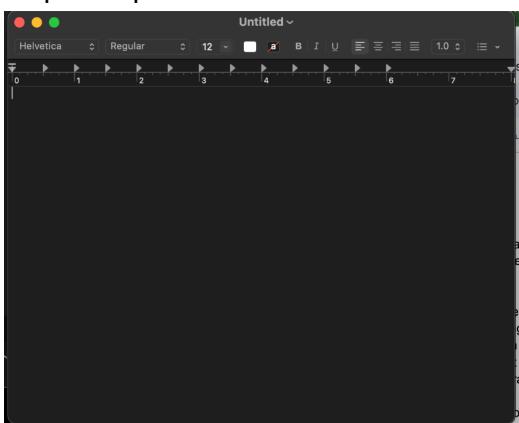

Step 2= Click on share then embed

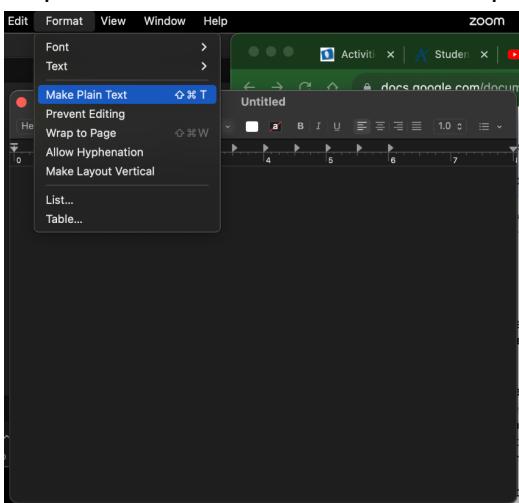

Step 3= Copy embed code

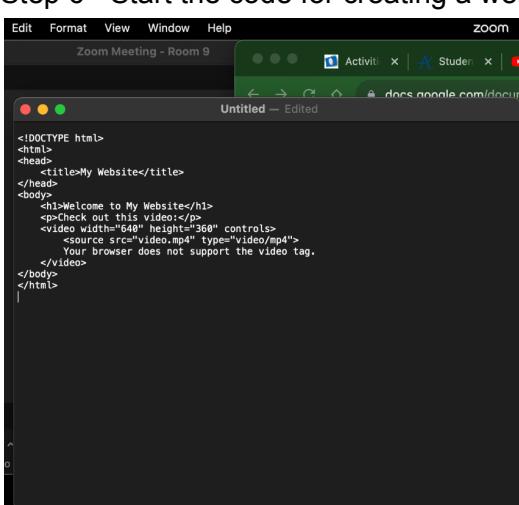

Step 4= OpenTextEdit

Step 5= click on format and make it a plain text

Step 6= Start the code for creating a website

Step 7= Insert embedded code in “video.mp4”

```

<!DOCTYPE html>
<html>
<head>
<title>My Website</title>
</head>
<body>
<h1>Welcome to My Website</h1>
<p>Check out this video:</p>
<video width="640" height="360" controls>
<source src="video.mp4" type="video/mp4">
Your browser does not support the video tag.
</video>
</body>
</html>

```

Step 8= Edit the width and height to your liking

```

<!DOCTYPE html>
<html>
<head>
<title>My Website</title>
</head>
<body>
<h1>Welcome to My Website</h1>
<p>Check out this video:</p>
<video width="640" height="360" controls>
<source src="video.mp4" type="video/mp4">
Your browser does not support the video tag.
</video>
</body>
</html>

```

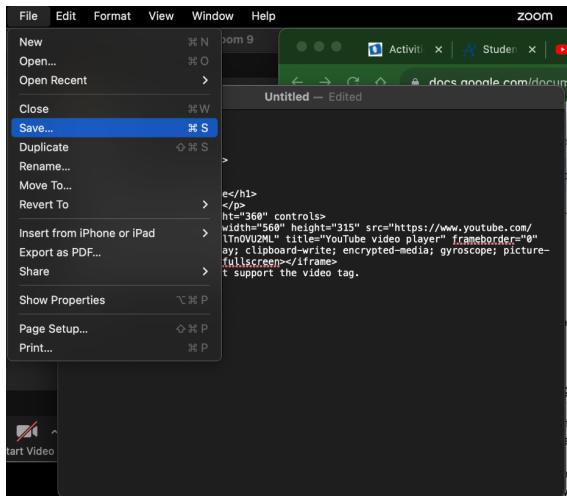

Step 9= Change all “video” to “ iframe and remove “type” attribute if it is a youtube video

```

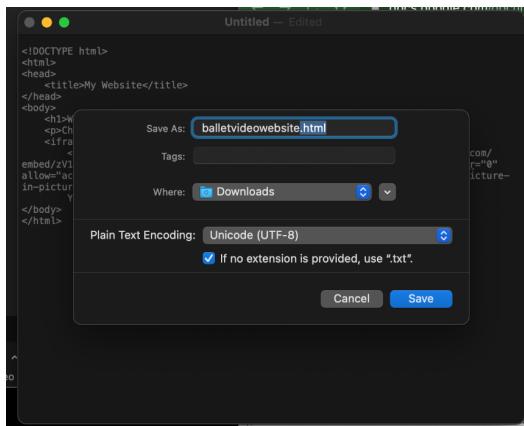

<!DOCTYPE html>
<html>
<head>
<title>My Website</title>
</head>
<body>
<h1>Welcome to My Website</h1>
<p>Check out this video:</p>
<video width="640" height="360" controls>
<source src="video.mp4" type="video/mp4">
Your browser does not support the video tag.
</video>
</body>
</html>

```

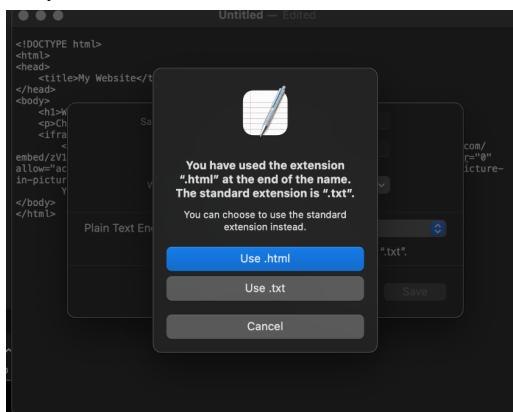

Step 10= Click on file then save

Step 11= Save whatever name you want but add the “.html” as an ending

Step 12 = click save and use “.html”

Step 13= Search up the name of your website in your computer and there you go
